

BARIL GROUP · NETHERLANDS · UNITED STATES

Repainting the future

One group. Two continents. One philosophy: **protect more, with less.**

Thin film | High solids | Coverage | Quality | Renewable, step by step

Internal · shareholders & management · concept for discussion · September 2026

WHY THIS DECK

How we see Baril Group: one international company in which the Netherlands and the USA pull together.

Not a Dutch company with an American branch, and not two companies sharing a name — but one group, one chemistry platform and one story, told with a local accent on each continent.

01 · ONE SHARED CORE

Thin film, high solids, coverage and quality. That is what we sell — in Angola, Indiana and in 's-Hertogenbosch alike.

02 · ONE MESSAGE, TWO ACCENTS

In the US we lead with quality and coverage. In Europe we add the sustainability story on top of the very same core.

03 · ONE DIRECTION

A gradual, performance-first transition to renewable and circular chemistry. Europe first — the US whenever its market asks for it.

ONE GROUP AT A GLANCE

Family-run, by conviction. Producing on two continents.

Founded in a shed — on both continents. Joined forces in 2006; a coatings group with plants in the Netherlands and the United States today, still led by the Duijghuisen & Harmon families.

1982

THE SHARED CORE

Protect more, with less.
Whatever the market, whatever the continent — this is the engine.

THIN FILM

Less coating on the structure

Lower dry-film thickness with the same or better protection — less material, fewer cans, faster jobs.

HIGH SOLIDS

More paint, less solvent

Higher solids per gallon: better coverage, lower emissions, more protection out of every can.

COVERAGE

Coverage you can calculate

More square feet per gallon, fewer maintenance cycles — a lower cost per protected square foot, not per can.

QUALITY

Proven, certified, durable

Engineered to the toughest specifications and qualified against them — up to the highest ISO 12944 categories.

OUR THREE PROMISES · Protect longer · Pollute less · Prove it

Same protection.
A lot less coating.

up to 60%

less film thickness · DualCure

~40%

less film thickness · SteelKote

- Higher coverage per gallon at a lower dry-film thickness
- Fewer maintenance cycles over the life of the asset
- Less material on the structure, fewer cans on the truck
- Same or better performance — a smaller footprint per protected square foot

Reductions versus conventional coatings are illustrative and product-specific; actual values depend on product, method and specification.

Two flagships. One philosophy.

DualCure DCC

Patented dual-curing technology: the 2K reaction of A and B **plus** a moisture cure from the air — two networks interlaced into one exceptionally dense mesh. Tighter bond, lasting flexibility.

- **Up to 60% less film thickness** — the same protection in a fraction of the conventional film build
- **Two coats in one day** — ambient cure — no added heat or energy
- **25-year+ protection in C5** at 200 µm (≈ 8 mils) total · NORSOK-certified systems
- **Lower CO_2 & VOC** — less coating, partly biobased

OEM & metal · Marine & offshore · Fleet & equipment

THIN FILM · HIGH SOLIDS · COVERAGE · QUALITY

SteelKote

Three decades of heavy-duty steel protection: epoxy primers and urethane topcoats proven in the harshest atmospheres — dense, watertight, wear-resistant.

- **ISO 12944** performance across all atmospheric corrosivity categories
- **Up to 25-year maintenance intervals** — large maintenance cycles kept to a minimum
- **Up to 40% less film thickness** — lower cost per square foot through higher solids
- **Immersion resistant** (fresh, salt, brackish) · NORSOK-certified · on a renewable path

Steel & infrastructure · Bridges, locks, plants · Marine & offshore

Developed together by 's-Hertogenbosch and Angola, Indiana — and produced on both continents. The workhorses of Baril Coatings on both sides of the Atlantic, and the clearest proof that thin film, high solids and quality belong in one can.

REPAINTING THE FUTURE · IN THE BROADEST SENSE

One phrase, three meanings — all true on both sides of the Atlantic.

01

Re-paint — literally

Refinish, restore, protect again. Coating over rust with AgriGuard. A flawless refinish with AutoGuard and FleetSpec. Steel that lasts another cycle with SteelKote.

AgriGuard · AutoGuard · FleetSpec · SteelKote

02

Re-new — the industry

Rebuilding coatings from the chemistry up: renewable and circular raw materials replacing fossil chemistry, phase by phase — without giving up an inch of performance.

Biobased range · Bariline · Copperant · Fairf

03

Re-imagine — protection itself

Longer life, less material, lower impact — for the object and for the planet. The future of protection is leaner, smarter and cleaner. We are painting it now.

DualCure · Thin film · Renewable, step by step

ONE MESSAGE, TWO ACCENTS

Same core. Local accent.

United States

Lead with what the buyer buys on.

- **Quality first** — proven, certified, built to last
- **Coverage per gallon** — high solids, thin film, fewer coats
- **Efficiency** — faster throughput, less downtime, lower cost per square foot
- **Dependable domestic supply** — made in Angola, Indiana, formulated for North American conditions
- Sustainability as **proof**, not as headline

THIN FILM · HIGH SOLIDS · COVERAGE · QUALITY

Europe

The same performance core — plus the story the market asks for.

- **Quality first** — the same proven, certified performance
- **Coverage & thin film** — the same high-solids engine
- **Renewable raw materials** — from <10% in 2022 to 55% today
- **Gradual transition to circular** — the European goal of a renewable alternative for every product by 2030, performance intact
- Sustainability as a **buying criterion** — EU Ecolabel · Cradle to Cradle · B Corp

THE TRANSITION, PACED

Quality first.
Transition gradual.

Every gallon of paint is chemistry — for a century crude-oil based. We are converting it to renewable and circular raw materials, one product line at a time, without ever touching quality. Same protection. Lower impact.

QUALITY · THE CONSTANT — NEVER TRADED

2022 · start	today	the road ahead
100%	100%	100%

RENEWABLE & CIRCULAR RAW MATERIALS · THE JOURNEY

2022 · start	today	the road ahead
<10%	55%	Aim for the best

EUROPE · TODAY

A buying criterion: CSRD reporting, EU Ecolabel, Cradle to Cradle, B Corp. The transition is part of the offer.

UNITED STATES · AN OPTION WE HOLD

Ready the moment customers or regulators ask — proven in Europe first, and never at the expense of performance or coverage.

MARKETS & BRANDS · ONE PORTFOLIO

Five markets. Nine brands. One philosophy.

= market option to explore

PROTECTIVE & INDUSTRIAL COATINGS

BARIL

Fortis coatings

DUALCURE · STEELKOTE
AQUARAN · BARILINE

OEM · METAL INDUSTRY

Steel & infrastructure, OEM & metal, marine & offshore — thin-film corrosion protection up to the highest ISO 12944 categories.

AGRICULTURE & HORTICULTURE

AgriGuard COATING SYSTEMS

Nixol Clear results

Rust encapsulation straight over corroded farm and fleet equipment; temporary, fully removable shading for glass and polycarbonate greenhouses.

AUTOMOTIVE & FLEET REFINISH

AutoGuard

FleetSpec™ Fleet Finishes

Complete refinish lines for autobody, truck and commercial transport — faster cure, no added heat, lasting gloss and precise color matches.

PROFESSIONAL & CONSUMER PAINTS

COPPERANT

fairf

Biobased professional paint with EU Ecolabel and Cradle to Cradle for the contractor; plant-based wall, trim and enamel paint for the home.

INDUSTRIAL TINTING

TintLab

Consistent, reproducible color pastes for industrial lines — without compromising the final coating's performance.

BARIL USA · ANGOLA, INDIANA

Proven quality, made close to the customer.

Founded in 2006 together with the Harmon family — today run by Dave Harmon and his children. Baril started with a 50% stake, scaled back to 10% after the passing of Hans, co-founder of Baril in the Netherlands. Formulated for North American conditions, produced in Indiana, delivered on short and dependable supply lines.

BARIL

Baril Coatings USA · protective & industrial

BARIL EUROPE · ’S-HERTOGENBOSCH AND BEYOND

The same performance — on a renewable path.

Headquarters and R&D in 's-Hertogenbosch, production in Etten-Leur, partners in Gliwice, Bucharest and Tbilisi. Renewable chemistry developed in-house and proven in the harshest European specifications.

BARIL · Fortis coatings · COPPERANT · fairf · Nixol Clear results · TintLab

Renewable raw materials · EU 2030 · a renewable alternative for every product · EU Ecolabel · Cradle to Cradle · B Corp · 2025

Made close to home — on both continents.

Coatings made close to the markets they serve: 's-Hertogenbosch for Europe, Angola, Indiana for North America. Short, dependable supply lines instead of chemistry that crosses the planet before it reaches the can.

- Production on our own solar and wind power
- An electric and hybrid fleet
- Inclusive hiring as policy, not project · Baril Academy
- Regional feedstocks that shrink the footprint — grown, processed and applied in the same region

For the US this is more than a green story: it is a hedge against long supply chains and a promise of availability — the same promise we make in Europe.

PROOF

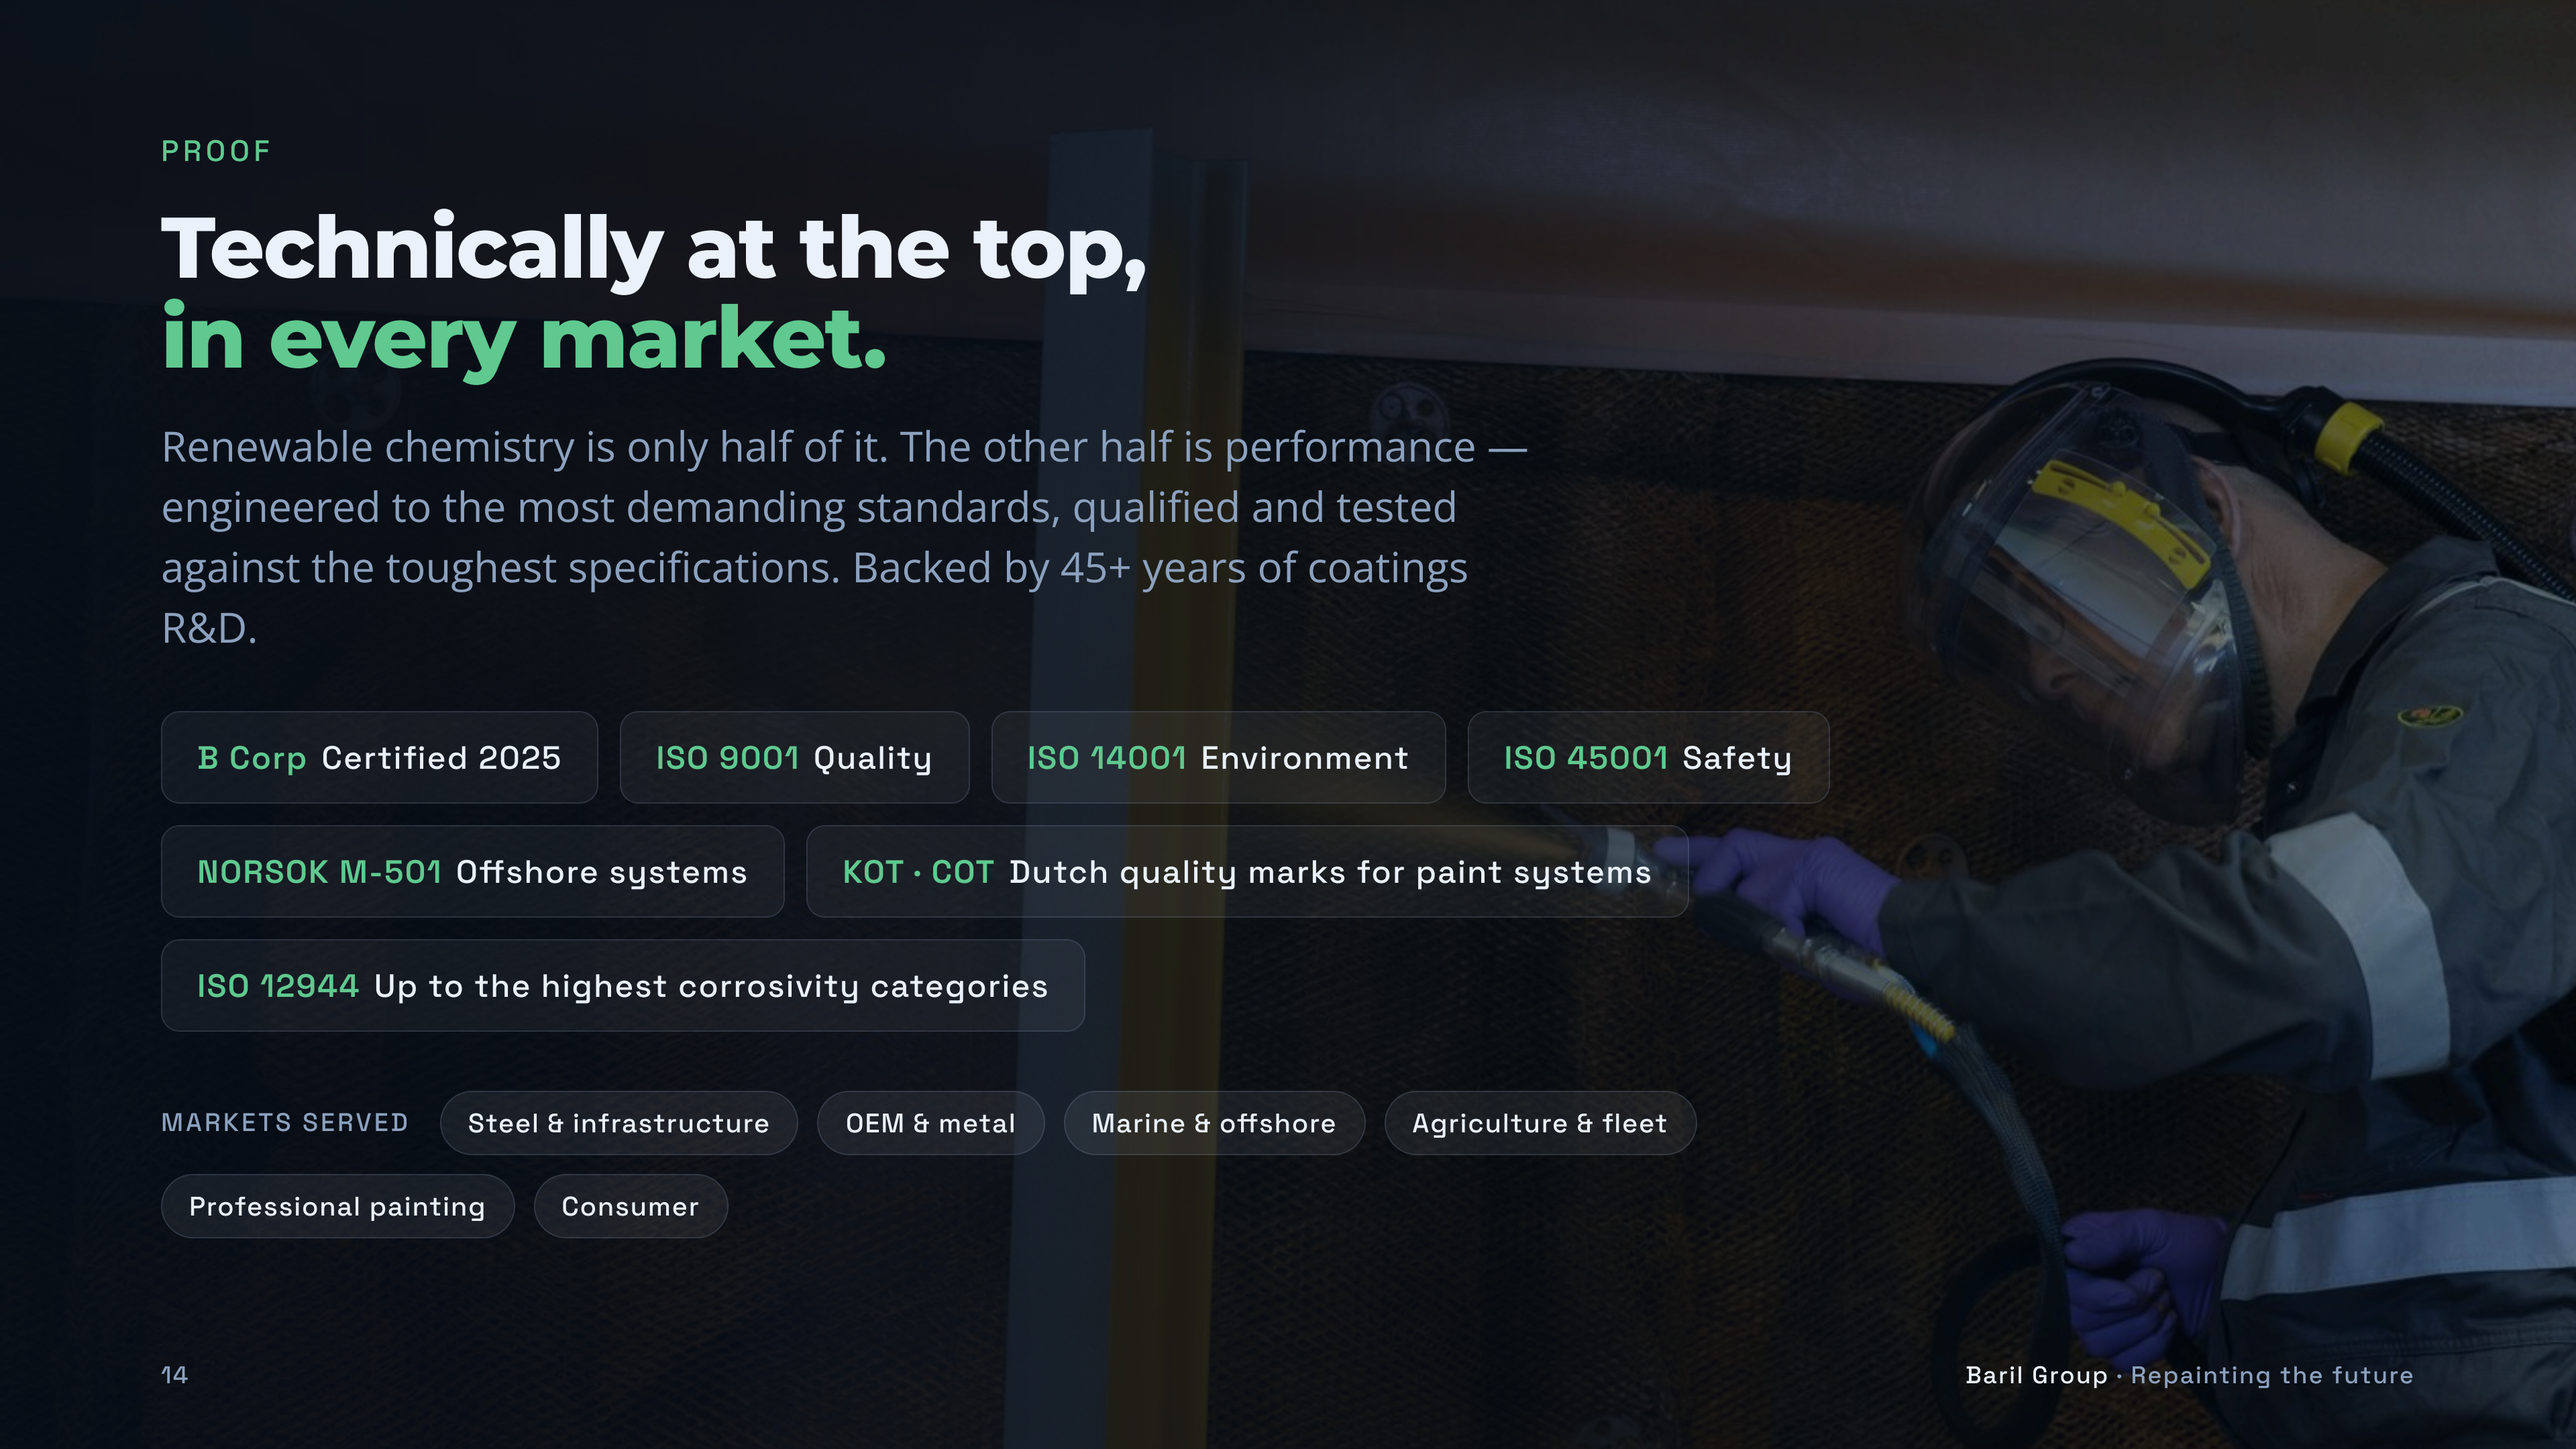

Technically at the top, in every market.

Renewable chemistry is only half of it. The other half is performance — engineered to the most demanding standards, qualified and tested against the toughest specifications. Backed by 45+ years of coatings R&D.

- **B Corp** Certified 2025
- **ISO 9001** Quality
- **ISO 14001** Environment
- **ISO 45001** Safety
- **NORSOK M-501** Offshore systems
- **KOT · COT** Dutch quality marks for paint systems
- **ISO 12944** Up to the highest corrosivity categories

HOW THE NETHERLANDS AND THE USA PULL TOGETHER

Two continents, one engine.

The Netherlands brings

- Renewable and circular chemistry, developed in-house
- Thin-film R&D — DualCure, SteelKote, Aquaran, Bariline
- European certification and specification know-how
- The group story, brand family and portal website

The USA brings

- Formulation for North American conditions and applicators
- Refinish, fleet and agricultural market expertise
- A second production base — supply security for the group
- Market access and a proving ground for the next step

SHARED

One chemistry platform

SHARED

One brand family & story

SHARED

One website portal, local brand sites

SHARED

One roadmap — paced per market

FOR DISCUSSION · WHAT THIS COULD MEAN FOR BARIL USA

Inspiration, not instruction.

LEAD WITH QUALITY & COVERAGE

Proven performance, high solids, thin film and cost per square foot are the story. Sustainability sits underneath as proof — visible, never loud.

”MADE IN ANGOLA, INDIANA” — QUIETLY

Dependable domestic supply is a strength in today's market. State it as a fact of proximity and reliability, not as a flag.

KEEP THE OPTION OPEN

Europe proves the renewable path first. When US customers or regulators ask, the answer is already on the shelf — tested, certified, in use.

ONE PORTAL, STRONG LOCAL BRANDS

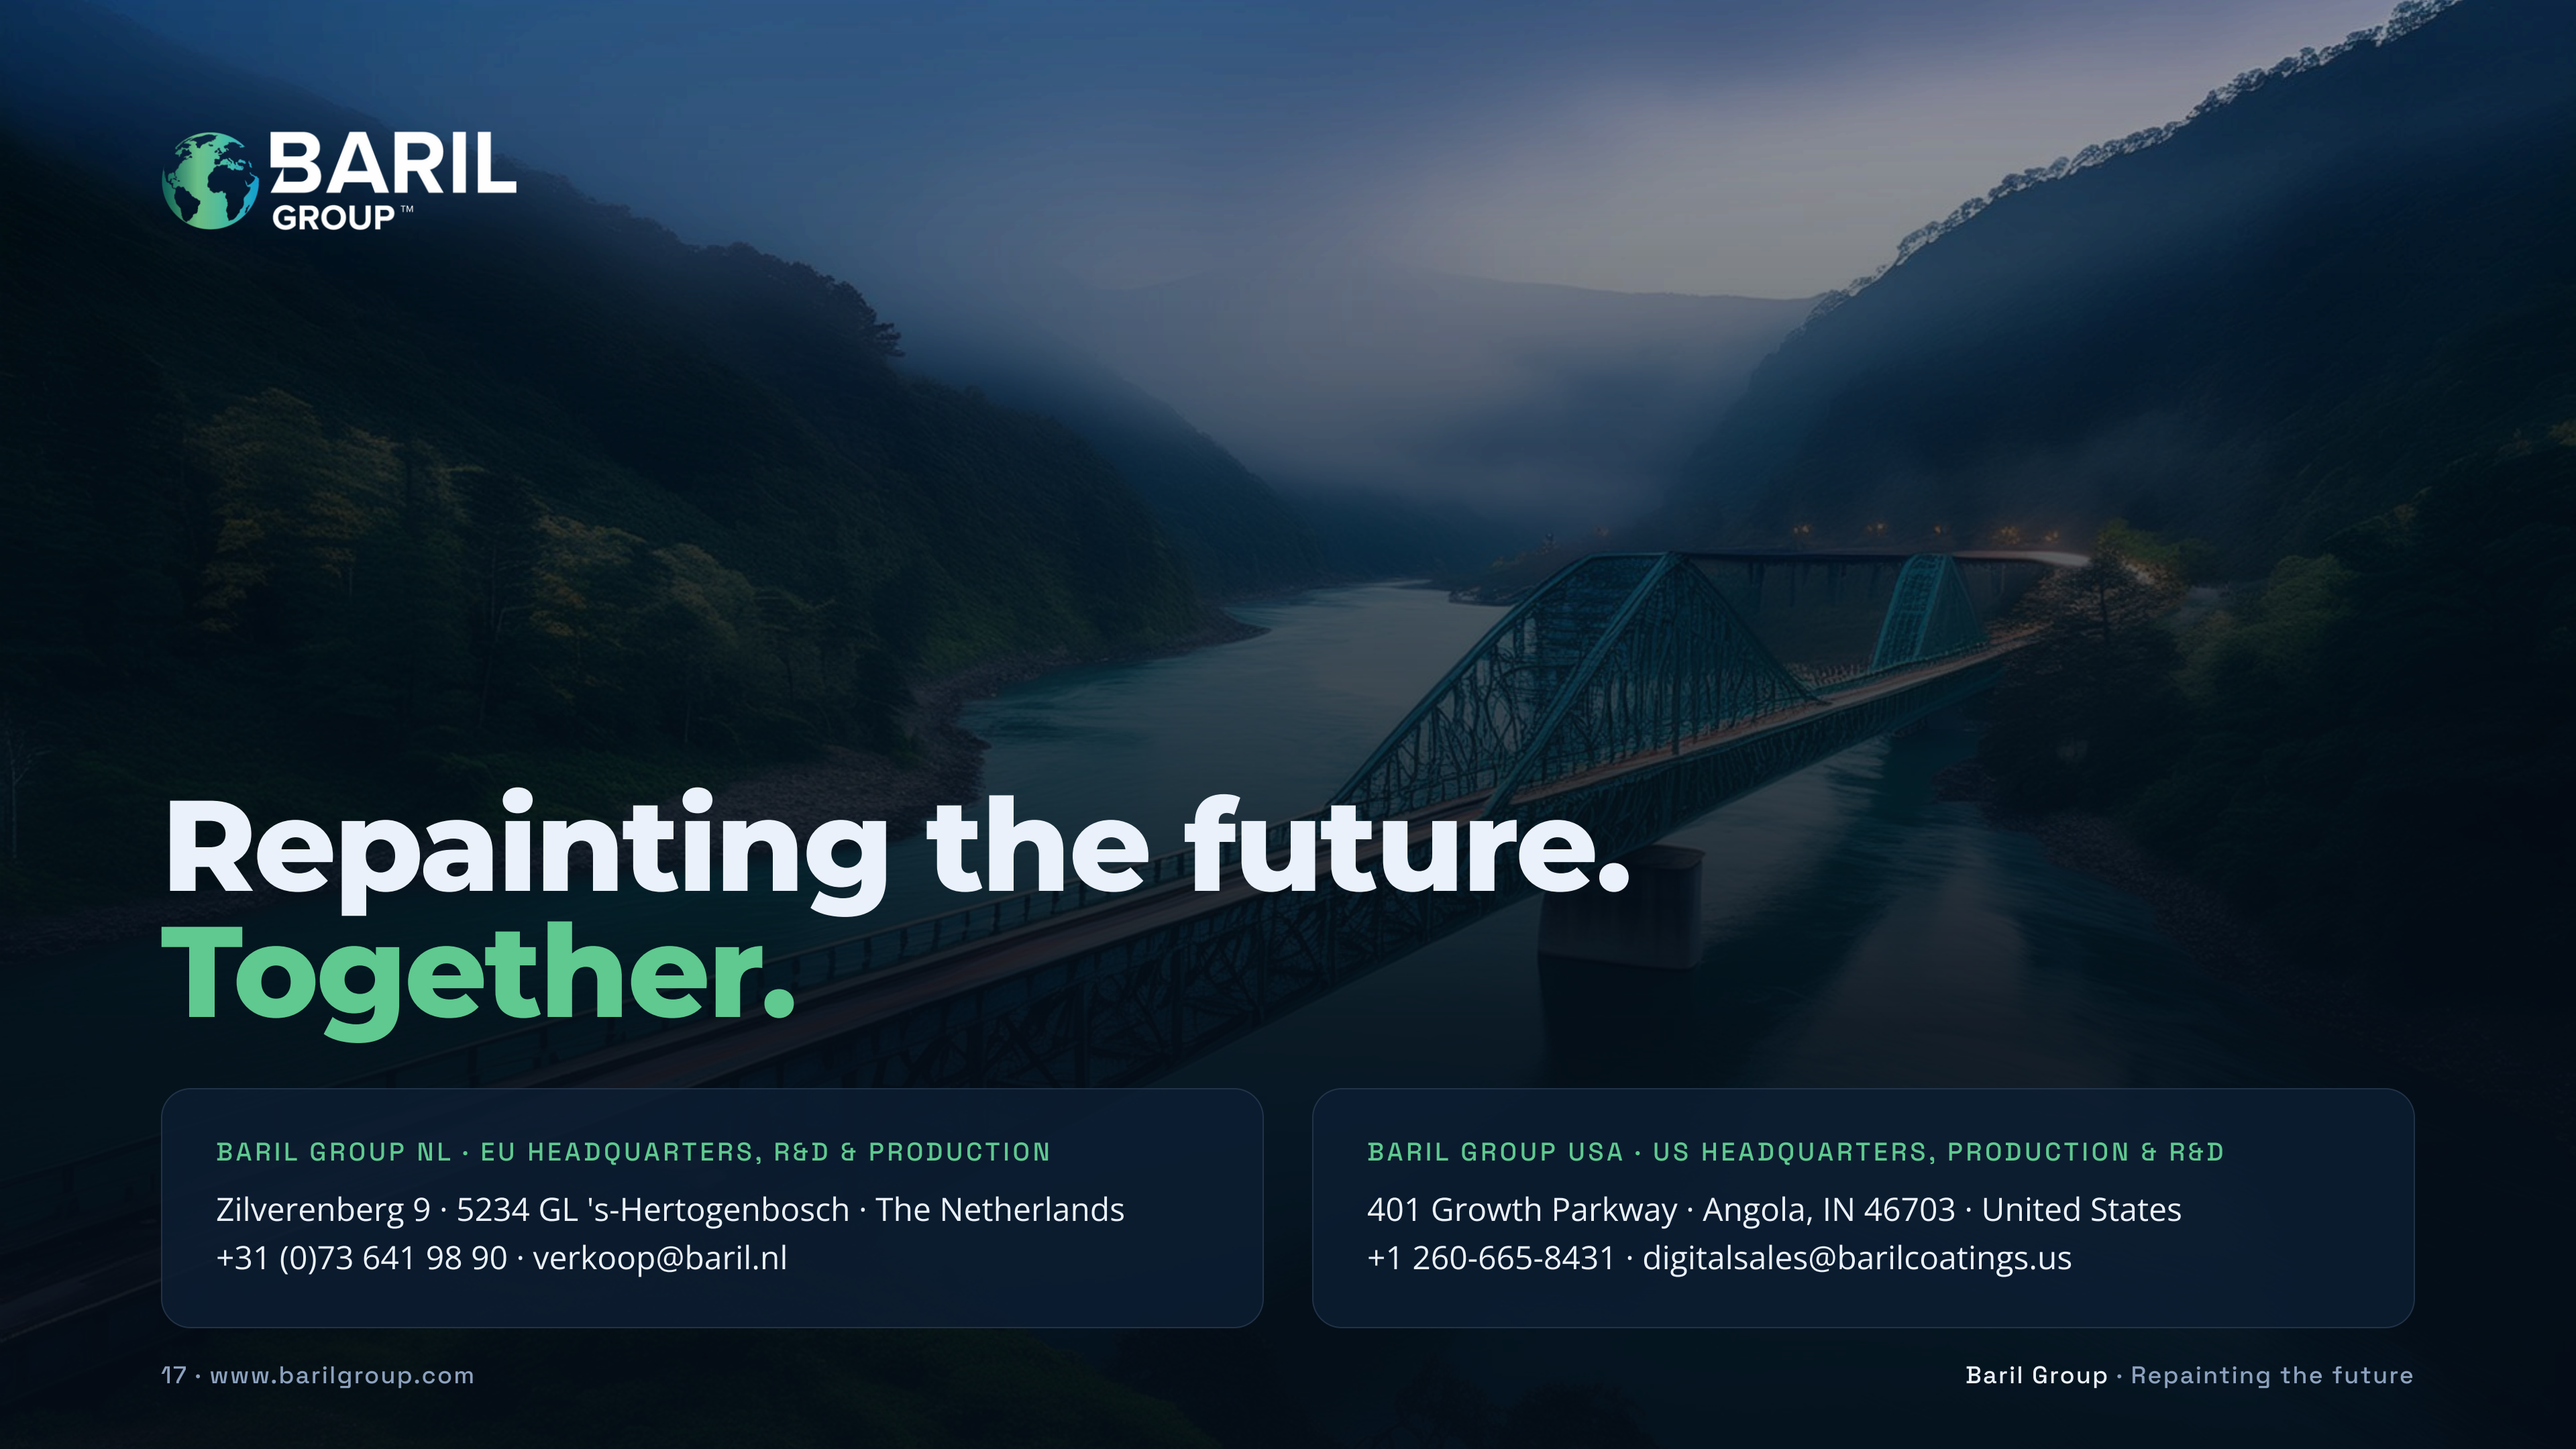

barilgroup.com routes visitors to markets and brand sites; every brand site carries a Baril Group button. Same story, local voice.

CROSS-ATLANTIC EXCHANGE

DualCure and SteelKote as thin-film heroes on both continents; AgriGuard know-how for European agri; Nixol horticulture know-how for North America.

ONE PHRASE, EVERYWHERE

Repainting the future — refinish, renew, re-imagine. Broad enough for a body shop in Indiana and an offshore spec in Rotterdam.

Repainting the future.
Together.
