

BARIL GROUP · NETHERLANDS · UNITED STATES

Repainting the future

One group. Two continents. One philosophy: protect more, with less.

Thin film

High solids

Yield

Quality

Renewable, step by step

WHY THIS DECK

How we see Baril Group: one international company in which the **Netherlands and the USA** pull together.

Not a Dutch company with an American branch, and not two companies sharing a name — but one group, one chemistry platform and one story, told with a local accent on each continent.

01 · ONE SHARED CORE

Thin film, high solids, yield and quality. That is what we sell — in Angola, Indiana and in 's-Hertogenbosch alike.

02 · ONE MESSAGE, TWO ACCENTS

In the US we lead with quality and yield. In Europe we add the sustainability story on top of the very same core.

03 · ONE DIRECTION

A gradual, performance-first transition to renewable and circular chemistry. Europe first — the US whenever its market asks for it.

ONE GROUP AT A GLANCE

Family-run, by conviction.
Producing on **two continents.**

Founded in a shed — on both continents. Joined forces in 2006; a coatings group with plants in the Netherlands and the United States today, still led by the Duijghuisen & Harmon families.

THE SHARED CORE

Protect more, **with less.** Whatever the market, whatever the continent — this is the engine.

THIN FILM

Less coating on the structure

Lower dry-film thickness with the same or better protection — less material, fewer cans, faster jobs.

HIGH SOLIDS

More paint, less solvent

Higher solids per gallon: better coverage, lower emissions, more protection out of every can.

YIELD

Coverage you can calculate

More square metres per litre, fewer maintenance cycles — a lower cost per protected m², not per can.

QUALITY

Proven, certified, durable

Engineered to the toughest specifications and qualified against them — up to the highest ISO 12944 classes.

OUR THREE PROMISES

Protect longer

Pollute less

Prove it

**Same protection.
A lot less coating.**

**up to
60%**

less film thickness • DualCure

~40%

less film thickness • SteelKote

- Higher coverage per gallon at a lower dry-film thickness
- Fewer maintenance cycles over the life of the asset
- Less material on the structure, fewer cans on the truck
- Same or better performance — a smaller footprint per protected m²

Reductions versus conventional coatings are illustrative and product-specific; actual values depend on product, method and specification.

Two flagships. One philosophy.

DualCure DCC

Patented dual-curing technology: the 2K reaction of A and B **plus** a moisture cure from the air — two networks interlaced into one exceptionally dense mesh. Tighter bond, lasting flexibility.

- **Up to 60% less film thickness** — the same protection in a fraction of the conventional film build
- **Two coats in one day** — cold cure, no added heat or energy
- **25-year+ protection in C5** at 200 µm total · NORSOK-certified systems
- **Lower CO₂ & VOC** — less coating, partly biobased

OEM & metal Marine & offshore Fleet & equipment

SteelKote

Three decades of heavy-duty steel protection: epoxy primers and urethane topcoats proven in the harshest atmospheres — dense, watertight, wear-resistant.

- **ISO 12944** performance across all atmospheric corrosivity classes
- **Up to 25-year maintenance intervals** — large maintenance cycles kept to a minimum
- **Up to 40% less film thickness** — lower cost per m² through higher solids
- **Immersion resistant** (fresh, salt, brackish) · NORSOK-certified · on a renewable path

Steel & infrastructure Bridges, locks, plants Marine & offshore

THIN FILM · HIGH SOLIDS · YIELD · QUALITY

Developed together by 's-Hertogenbosch and Angola, Indiana — and produced on both continents. The workhorses of Baril Coatings on both sides of the Atlantic, and the clearest proof that thin film, high solids and quality belong in one can.

One phrase, three meanings — all true on both sides of the Atlantic.

01

Re-paint — literally

Refinish, restore, protect again. Coating over rust with AgriGuard. A flawless refinish with AutoGuard and FleetSpec. Steel that lasts another cycle with SteelKote.

AgriGuard

AutoGuard

FleetSpec

SteelKote

02

Re-new — the industry

Rebuilding coatings from the chemistry up: renewable and circular raw materials replacing fossil chemistry, phase by phase — without giving up an inch of performance.

Biobased range

Bariline

Copperant

Fairf

03

Re-imagine — protection itself

Longer life, less material, lower impact — for the object and for the planet. The future of protection is leaner, smarter and cleaner. We are painting it now.

DualCure

Thin film

Renewable, step by step

Same core. Local accent.

United States

Lead with what the buyer buys on.

- **Quality first** — proven, certified, built to last
- **Yield per gallon** — high solids, thin film, fewer coats
- **Efficiency** — faster throughput, less downtime, lower cost per m²
- **Dependable domestic supply** — made in Angola, Indiana, formulated for North American conditions
- Sustainability as **proof**, not as headline

Europe

The same performance core — plus the story the market asks for.

- **Quality first** — the same proven, certified performance
- **Yield & thin film** — the same high-solids engine
- **Renewable raw materials** — from <10% in 2022 to 55% today
- **Gradual transition to circular** — the European goal of 100% by 2030, performance intact
- Sustainability as a **buying criterion** — EU Ecolabel · Cradle to Cradle · B Corp

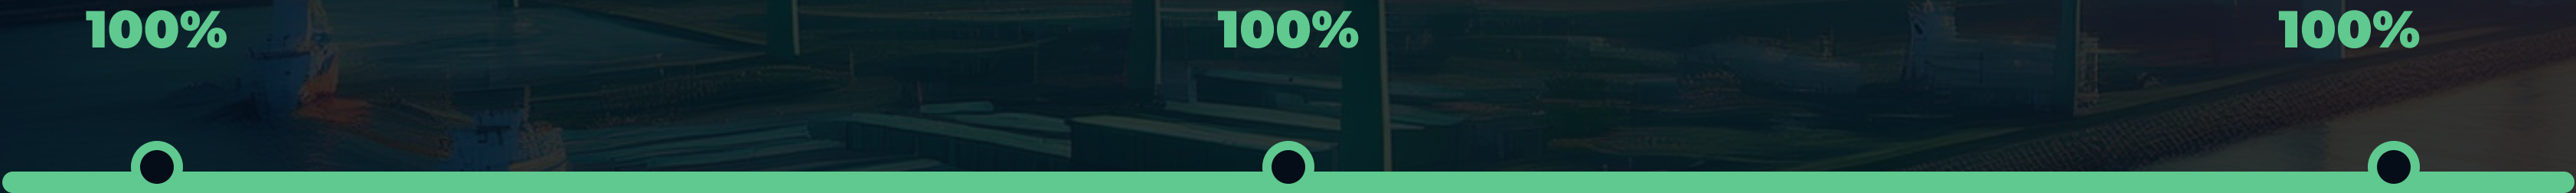

THIN FILM · HIGH SOLIDS · YIELD · QUALITY

THE TRANSITION, PACED

Quality first. Transition gradual.

Every litre of paint is chemistry — for a century crude-oil based. We are converting it to renewable and circular raw materials, one product line at a time, without ever touching quality. Same protection. Lower impact.

QUALITY · THE CONSTANT — NEVER TRADED

RENEWABLE & CIRCULAR RAW MATERIALS · THE JOURNEY

EUROPE · TODAY

A buying criterion: CSRD reporting, EU Ecolabel, Cradle to Cradle, B Corp. The transition is part of the offer.

UNITED STATES · AN OPTION WE HOLD

Ready the moment customers or regulators ask — proven in Europe first, and never at the expense of performance or yield.

Six markets. Ten brands. One philosophy.

 = market option to explore

PROTECTIVE & INDUSTRIAL COATINGS

DUALCURE · STEELKOTE
AQUARAN · BARILINE

OEM · METAL INDUSTRY

Steel & infrastructure, OEM & metal, marine & offshore — thin-film corrosion protection up to the highest ISO 12944 classes.

AGRICULTURE & HORTICULTURE

Rust encapsulation straight over corroded farm and fleet equipment; temporary, fully removable shading for glass and polycarbonate greenhouses.

AUTOMOTIVE & FLEET REFINISH

Complete refinish lines for autobody, truck and commercial transport — faster cure, no added heat, lasting gloss and precise colour matches.

TRADE & HOME PAINTS

Biobased trade paint with EU Ecolabel and Cradle to Cradle for the professional; plant-based wall and lacquer paint for the home.

FLOOR COATINGS

Epoxy, polyaspartic and urethane systems — 100% solids, 0-VOC — for garages, showrooms and the toughest industrial floors.

INDUSTRIAL TINTING

Consistent, reproducible colour pastes for industrial lines — without compromising the final coating's performance.

Proven quality, made **close to the customer.**

Founded in 2006 together with the Harmon family — today run by Dave Harmon and his children. Formulated for North American conditions, produced in Indiana, delivered on short and dependable supply lines.

Quality first

Yield per gallon

High solids

Dependable domestic supply

DualCure (DCC)

SteelKote

Baril Coatings USA · protective & industrial

The same performance — on a **renewable path.**

Headquarters and R&D in 's-Hertogenbosch, production in Etten-Leur, partners in Gliwice, Bucharest and Tbilisi. Renewable chemistry developed in-house and proven in the harshest European specifications.

Renewable raw materials

EU goal · 55% → 100% by 2030

EU Ecolabel

Cradle to Cradle

B Corp · 2025

Made **close to home** — on both continents.

Coatings made close to the markets they serve: 's-Hertogenbosch for Europe, Angola, Indiana for North America. Short, dependable supply lines instead of chemistry that crosses the planet before it reaches the can.

- Production on our own solar and wind power
- An electric and hybrid fleet
- Inclusive hiring as policy, not project · Baril Academy
- Regional feedstocks that shrink the footprint — grown, processed and applied in the same region

For the US this is more than a green story: it is a hedge against long supply chains and a promise of availability — the same promise we make in Europe.

PROOF

Technically at the top, in every market.

Renewable chemistry is only half of it. The other half is performance — engineered to the most demanding standards, qualified and tested against the toughest specifications. Backed by 45+ years of coatings R&D.

Professional painting

Consumer

Two continents, one engine.

The Netherlands brings

- Renewable and circular chemistry, developed in-house
- Thin-film R&D — DualCure, SteelKote, Aquaran, Bariline
- European certification and specification know-how
- The group story, brand family and portal website

The USA brings

- Formulation for North American conditions and applicators
- Refinish, fleet and agricultural market expertise
- A second production base — supply security for the group
- Market access and a proving ground for the next step

SHARED

One chemistry platform

SHARED

One brand family & story

SHARED

One website portal, local brand sites

SHARED

One roadmap — paced per market

Inspiration, not instruction.

LEAD WITH QUALITY & YIELD

Proven performance, high solids, thin film and cost per m² are the story. Sustainability sits underneath as proof — visible, never loud.

”MADE IN ANGOLA, INDIANA” — QUIETLY

Dependable domestic supply is a strength in today's market. State it as a fact of proximity and reliability, not as a flag.

KEEP THE OPTION OPEN

Europe proves the renewable path first. When US customers or regulators ask, the answer is already on the shelf — tested, certified, in use.

ONE PORTAL, STRONG LOCAL BRANDS

barilgroup.com routes visitors to markets and brand sites; every brand site carries a Baril Group button. Same story, local voice.

CROSS-ATLANTIC EXCHANGE

DualCure and SteelKote as thin-film heroes on both continents; AgriGuard know-how for European agri; Nixol horticulture know-how for North America.

ONE PHRASE, EVERYWHERE

Repainting the future — refinish, renew, re-imagine. Broad enough for a body shop in Indiana and an offshore spec in Rotterdam.

Repainting the future. Together.
